

PERFILES ISO

ISO PROFILES

ISO

El sistema ISO está diseñado para ofrecer una solución versátil y adaptable a diferentes espesores de pared. Tanto el marco como la puerta están concebidos con un diseño modular que permite su ajuste mediante perfiles de PVC, que no solo realiza función de suplemento, sino también de corte térmico suplementos adicionales, lo que facilita una instalación precisa y sin necesidad de piezas a medida.

El marco cuenta con suplementos disponibles en las siguientes medidas:

- 20 mm
- 50 mm
- 60 mm

Combinando estos suplementos es posible alcanzar el grosor deseado, adaptando el marco a distintos espesores de pared.

La puerta no requiere suplementos, ya que está disponible en distintos grosores según las necesidades del proyecto:

- 60 mm
- 80 mm
- 100 mm
- 120 mm

Esto permite seleccionar directamente la puerta adecuada en función del espesor deseado, facilitando una instalación sencilla y precisa.

Materiales:

- Perfiles de Aluminio 6060 con tratamiento térmico RAL 9010
- Perfiles PVC resistente

ISO

The ISO system is designed to offer a versatile solution that can be adapted to different wall thicknesses. Both the frame and the door are designed with a modular design that allows them to be adjusted using PVC profiles, which not only act as supplements, but also as additional thermal breaks, facilitating precise installation without the need for custom-made parts.

The frame has supplements available in the following sizes:

- 20 mm
- 50 mm
- 60 mm

By combining these supplements, it is possible to achieve the desired thickness, adapting the frame to different wall thicknesses.

The door does not require supplements, as it is available in different thicknesses according to the needs of the project:

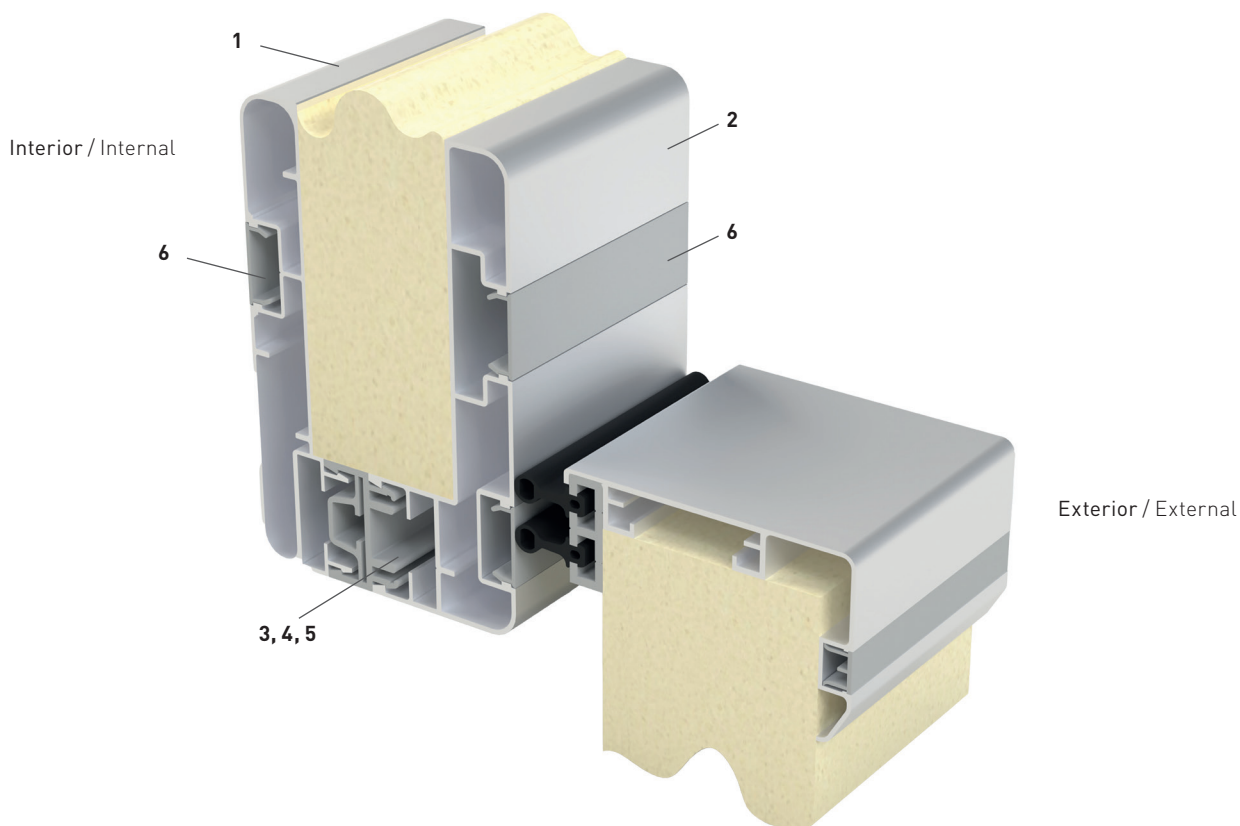

- 60 mm
- 80 mm
- 100 mm
- 120 mm

This allows you to directly select the appropriate door based on the desired thickness, facilitating simple and precise installation.

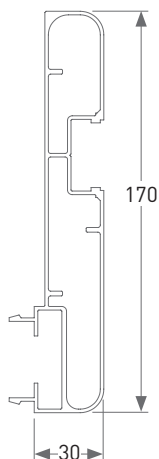

Materials:

- 6060 aluminium profiles with RAL 9010 heat treatment
- Resistant PVC profiles
